How to Use Hot Signals in Kampaign

Step 1: Access Hot Signals

1. Log in to **https://kampaign.onepgr.com/**
2. From the left sidebar, go to **Accounts**
3. Click **All Signals**
4. Select the **account list** you want to analyze
5. Open the **Hot Signals** tab

Step 2: Identify High-Priority Accounts

- **Hotness scores** appear in the first column as **orange/yellow badges**
- The table is **sorted by Hotness (highest first)** by default
- **Higher scores = higher buying intent**
  - Example: **82, 78, 75**
- Focus on accounts with a **Hotness score of 75+**

Step 3: Take Action

You can act on high-hotness accounts in two ways:

Option A: Add Account to a Campaign

- Use when you want **automated, multi-touch outreach**
- Ideal for nurturing accounts showing strong but not immediate intent

Option B: Send a Spear Message

- Use for **immediate, personalized outreach**
- Best when the signal is recent or highly relevant

Best Practices

- 🔥 **Prioritize accounts with Hotness ≥ 75**
- ⏱️ **Act within 24–48 hours** of a signal for maximum impact
- 🎯 Use **Spear Messages** for urgent, high-intent signals
- 🔁 Use **Campaigns** for structured, repeatable follow-ups
